

FORT KNOX

SAFES  VAULTS

2025 BUYING GUIDE & CATALOG

Fort Knox was founded in the year 1982 by Tom James, with a mission to protect firearms from unwanted hands. To this day, we remain family owned and operated, expanding our commitment to safeguard not just firearms, but also cherished memories, heirlooms, and valuables. This journey has solidified our position as the gold standard in security, with a dedication to American quality, ingenuity, and integrity.

Today, over four decades later, our unwavering commitment to protecting your legacy echoes the enduring spirit of our founder and the principles that have guided us from the beginning.

01. SIZE OPTIONS

Consider the following questions to ensure you get the most out of your Fort Knox Safe

How Do I Choose the Right Size?

Evaluate the size, shape, volume, and nature of your valuables, as these factors will significantly influence the size and interior configuration of your safe. Consider the number of firearms you own and anticipate the future growth of your collection by selecting a safe larger than your current needs. This will ensure space for your expanding collection.

Organize and preserve your collection with our modular interior configurations designed to suit your unique requirements. Including shelves, gun racks, door organizers and jewelry cabinets. See Interior Configurations on pg. 14

Where Will the Safe Be Installed?

Measure your intended destination and delivery pathway, including door frames, narrow hallways, and tight corners to ensure your safe will fit. Internal, external, left, or right hinges are available to better accommodate your space. We recommend anchoring your safe down for added safety and security.

What Are the Limitations on Delivery?

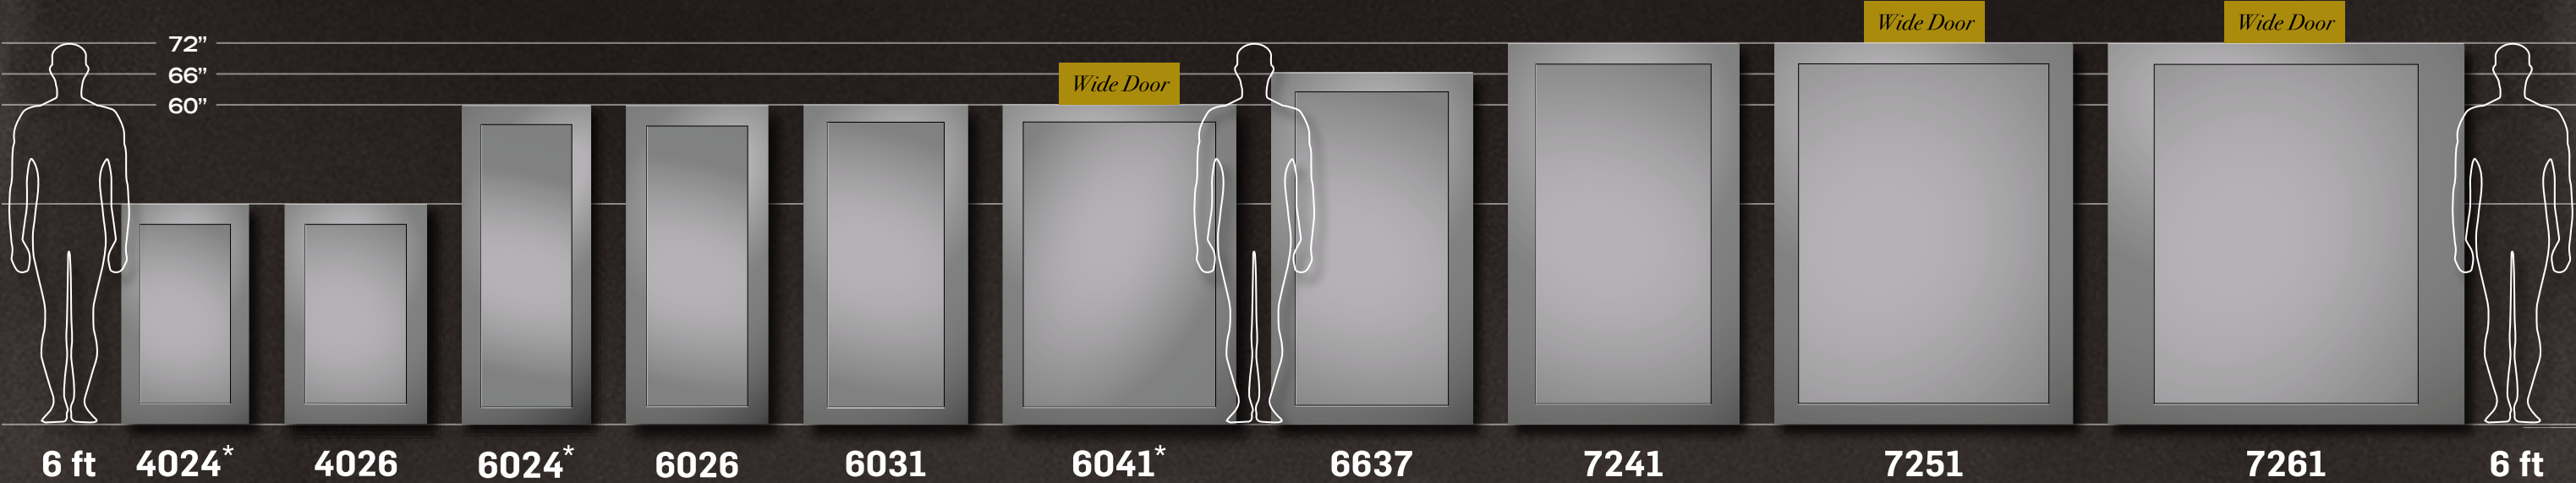

Limitations such as ceiling height, stairs, stair-landings, turns, and the size/weight of the safe can make some installations difficult. If you have any questions about delivery or install, please contact Fort Knox.

02. BODY STEEL THICKNESS

Every Fort Knox product is proudly crafted in the USA using thick, high-quality American steel.

What Makes the Construction of Fort Knox Safes Different?

Fort Knox safes and vault doors begin as thick sheets of metal that are machine folded to minimize joints; remaining seams are welded both internally and externally for 100% weld penetration, creating a seamless, durable, solid steel enclosure.

What is Overall Steel Body Thickness?

The combined thickness of the outer steel body and the inner steel liners determine a safe's overall body thickness. For example, the Titan consists of a 3/16" steel body and a 3/16" ArmaKnox AR500 Package

resulting in a combined thickness of 3/8".
Refer to the chart below for a comprehensive breakdown of the overall steel body thickness in our safes.

Can I Upgrade My Steel Thickness?

Yes, maximize your security by adding up to 1/2" of layered protection with torch-resistant stainless, 7ga ballistic ArmaKnox AR500, or up to four layers of 10ga carbon steel. Mix and match to create the ultimate defense.

Upgrade details available on page 11.

* Fire-protection not shown in graph

03. DOOR STEEL THICKNESS

What is Door Edge Thickness?

Door Edge Thickness is found by combining the security door plate(s) thickness with the thickness of the door jacket.

What is a Hard Plate?

The **Hard Plate or Mounting Plate** is a ball-bearing reinforced, hardened steel plate that protects your lock and Relocker from cutting and drilling attacks.

What are Multiple Relockers?

Multiple Relockers are a defensive mechanism that will activate if an intruder attempts to cut the door, rendering it inoperable, keeping intruders out.

Why is The Security Plate Important?

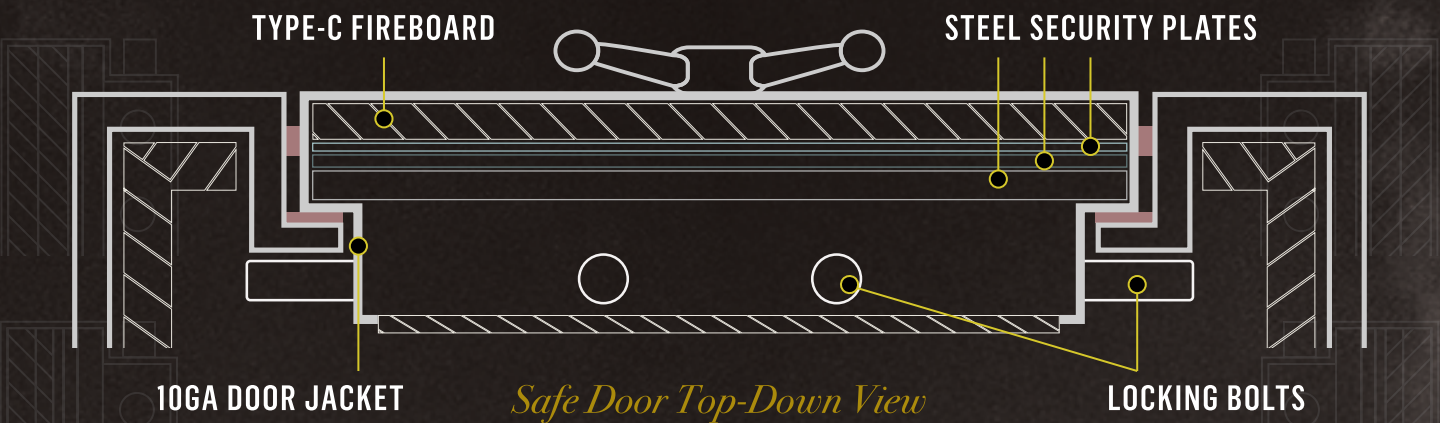

The security plate, or door plate, is a heavy sheet of steel welded inside the 10ga door jacket. The plate fully covers the door face, it adds strength, security, and protects the door's integrity in the event of fire or forced entry.

Refer to the chart below for a comprehensive breakdown of our doors composition.

Can I Upgrade My Security Plates?

You can increase the number of plates and thickness of steel used in your safe door, including Carbon steel, Stainless steel, and ArmaKnox AR500.

Upgrades and Inner Steel Liners can be found on pg. 11

04. FIRE PROTECTION

Rest Assured Knowing our Robust Fire-Protection System Fortifies Your Fort Knox Safe.

How's Fort Knox Fire Protection Different?

At Fort Knox, our commitment to crafting top-tier fire protection sets us apart. Here's how we achieve it:

- Type-C Fireboard
- Palusol Fire Seal
- Thermal Barrier
- Security Plate
- Welded Anchors
- Thicker Steel
- Smoke Seal
- Solid Welded Seams

For a comprehensive breakdown see page 9

How Much Fire Protection Do I Need?

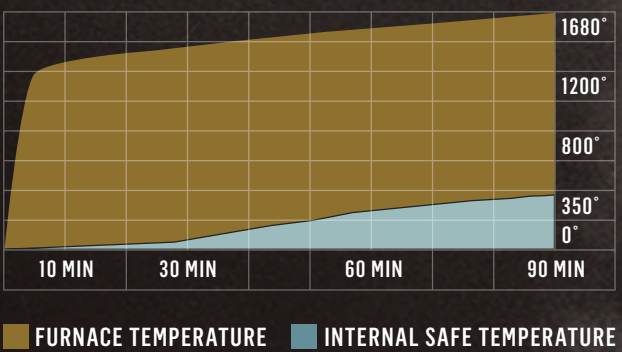

Consider the following when selecting your safes fire protection: The average house fire can exceed temperatures of 1,500°F and can burn for more than an hour. We offer fire protection up to 1,680°F in 90 minutes. For increased fire protection, choose a model with a 2 hour fire rating or upgrade with a Reinforced Fire Liner for the same protection.

RFL is not available on Spartan or Maverick models.

MODEL:	SPARTAN	MAVERICK	DEFENDER	PROTECTOR	EXECUTIVE	GUARDIAN	TITAN	LEGEND	HOME SAFE	VAULT DOOR IN-SWING	VAULT DOOR OUT-SWING
FIRE RATING	1,200° F In 60 Min	1,200° F In 75 Min	1,680° F In 90 Min	1,680° F In 90 Min	1,680° F In 90 Min	1,680° F In 90 Min	1,680° F In 90 Min	1,680° F In 90 Min	1,680° F In 120 Min	N/A	N/A

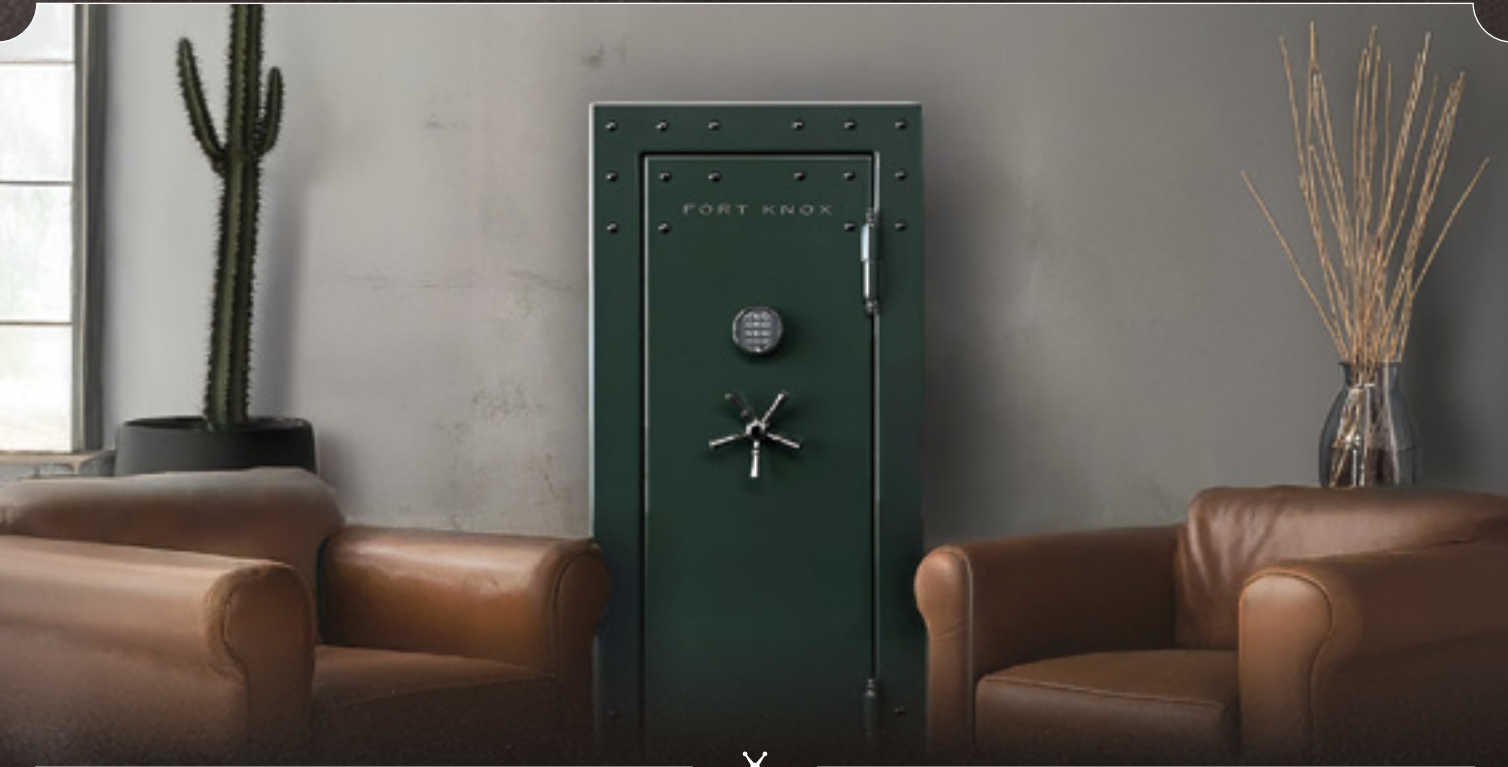

Add a Reinforced-Fire-Liner (RFL) for up to 2hr Protection! Not available on all models, More Info On Page 11

FIRE TEST: UP TO 1680° IN 90 MINUTES

How Are the Safes Fire Tested?

Fort Knox safes are subjected to an intense house fire simulation. The safe is monitored internally by nine thermocouple sensors that are placed evenly from top to bottom as per UL72 standards. The test is terminated once the first sensor reaches 350°F, we then document the duration and external temperature to get our fire rating. The results shown are for up to 1,680°F in 90 Minutes.

SECURITY PLATE

Fort Knox Security Plates ensure the door retains its shape, creating a resilient barrier against the encroaching flames. Intense heat will cause a thinner safe to warp, breaking the fire seal, allowing destructive flames to penetrate.

SMOKE & FIRE SEAL

There are 2 seals around the perimeter of the safe door. The Smoke Seal keeps smoke, heat, and caustic residue at bay. The Fire Seal blocks fire from entering by activating Palusol, which expands at 212°F.

THERMAL BARRIER

Thermal Barrier is a dead air gap between the outer wall and the Type-C Fireboard created by the welded anchors. This gap significantly slows down the external transfer of heat into your safe during a fire.

TYPE-C FIREBOARD

Fort Knox uses Type-C Fireboard that includes Vermiculite, a shrinkage compensating additive of blended fibers, that help maintain the structure and fire resistant properties ensuring your valuables are protected. Some manufacturers only use common drywall.

WELDED ANCHORS

Glue can melt during a fire causing fireboard to slump away from safe walls, leaving your valuables vulnerable to the flames. Fort Knox secures your fireboard using Welded Anchors to ensure the longevity and efficacy of your fire protection.

Titan, Pepperdust Finish 6637

05. UPGRADES & PACKAGES

Reinforce your Safe or Vault Door with more steel, fire-protection, & peace of mind.

SECURITY STEEL UPGRADE:

Add up to 4 layers or 1/2" of Steel

ARMAKNOX AR500 PACKAGE

ArmaKnox AR500 is made of abrasion resistant 7ga steel plates that cover all six sides of the safe. This hardened steel creates a cut, drill, and ballistic resistant barrier between your valuables and potential security breaches.

STAINLESS STEEL PACKAGE

Enhance your safe with sheets of 10ga Stainless-Steel lining all six sides, providing a cut, drill and torch resistant barrier. This upgrade delivers exceptional durability and unmatched protection for those demanding the highest level of security.

CARBON STEEL LINER

Increase the security of your safe by fortifying its walls with 10ga steel plates. Add up to four additional layers of steel, creating a significant obstacle that will waste valuable time for potential burglars.

STEEL BODY & DOOR UPGRADE

Body Upgrade: increase the steel body thickness of the safe. *Ex. 10ga up to 3/16", or 3/16" up to 1/4"*

Door Upgrade: add an additional 1/8" steel security plate to your door.

Not Available on all models/sizes.

FIRE-PROTECTION UPGRADE:

Upgrade with RFL for the Ultimate Fire Protection

REINFORCED FIRE LINER

UP TO 1680F IN
120 MINUTES

Upgrade your fire protection by adding additional layers of Type-C fireboard to all six sides of your safe for up to 2 hours of fire protection.

Adding RFL Reduces Gun Capacity, RFL not available on Maverick or Spartan Models

BODY DEPTH UPGRADE:

Increase your storage capacity with added 9" of depth!

EXTRA-DEEP UPGRADE

INCREASE OVERALL
DEPTH TO 40"

Upgrade the box depth of your safe from 27" to 40"! The XD upgraded safe may not be able to fit through a standard door frame.

XD upgrade only available on sizes: 7251 and 7261

VAULT DOOR FAQ'S

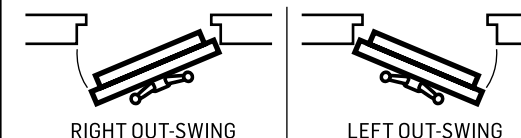

ATTENTION: Accurate measurements of the rough opening, wall thickness, and face frame clearance are the customer's responsibility to ensure a secure fit and maximum protection. *Replacement parts due to incorrect measurements will incur additional charges.*

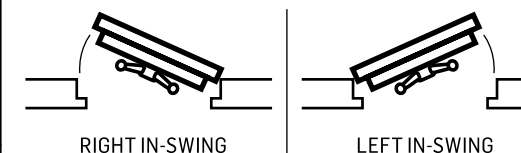

ROUGH OPENINGS MEASUREMENTS

Size	HEIGHT	WIDTH
8240	82"	40"
8248	82"	48"
9640	96"	40"
9648	96"	48"

OUT-SWING HINGES

IN-SWING HINGES

1. ROUGH OPENING

Measure Height & Width of the Rough Opening.
For Maximum Security and Fire Protection mount door directly to concrete wall.
Remove wood framing and imperfections, leave smooth concrete only.

2. WALL THICKNESS

Measure the wall thickness of concrete alone.
Measure in 3 places to ensure accuracy.
Generally measurement will be between 6-12"
Round measurement to nearest inch.

3. FACE FRAME

Vault Door frame will clamp directly to concrete.
Leave at least 4" clearance around rough opening.
Clear both sides of rough opening, inside and out.

4. IN-SWING VS OUT-SWING

The In-Swing door (internal hinge) ensures functionality if blocked from the outside, ideal for storm shelters or panic rooms.
Out-Swing (external hinge) offers 180° door swing radius which benefits those with limited vault room space.
For maximum security and fire protection clamp the Vault Door frame directly to the concrete.
